

Navigator 6 with a new menu design and online search

A new version of MapFactor Navigator for Android is now available.

Navigator 6 brings major improvements, especially to the user interface. Here is an overview of the most notable changes:

Main menu with search

The biggest change is the new main menu with integrated search at its heart. You can quickly find your destination and navigate there instantly.

Premium online search

A new online fulltext search engine has been introduced in Navigator 6 as an upgrade of the previous online search. A one-year subscription for this premium feature is now available as in-app purchase for a small fee.

New map zoom

Version 6 also includes a **new zoom bar** on the map. Simply press and hold the +- button on the right side of your screen (visible when moving a map) and move it up and down to achieve the desired zoom (a supportive blue scale ruler appears on the right side of the screen).

Further improvements and changes include:

- **E-shop** redesigned and connected fully to your Google account
- **Dynamic shortcuts** – long-press on the Navigator launcher icon displays a list of your Favourites and lets you navigate directly to your favourite destination.
- Vehicle manager – scroll horizontally to pick the desired vehicle profile
- A new easier to read **infopanel font**
- New app option to enable larger main menu buttons
